## Desmet & Insta-Pro International Announce Collaboration to Deliver ExPress® Processing Technology to Global Feed Industry

**Brussels, Belgium & Grimes, Iowa USA – June 24, 2025** Desmet, a world-renowned provider of engineering solutions for the oilseeds, oils & fats, oleochemicals and feed industries, and Insta-Pro International, a global leader in high-shear dry extrusion technology, are pleased to announce an expanded strategic collaboration to deliver ExPress® extrusion-pressing technology to a broader global market.

This partnership now enables the deployment of ExPress® systems across projects of all sizes, unlocking new opportunities for integrated agribusinesses and feed producers. The collaboration is particularly focused on the **animal feed industry**, where ExPress® soybean meal has demonstrated **remarkable benefits in poultry nutrition**, including improved digestibility and animal performance.

“Our collaboration with Desmet allows us to bring the proven nutritional benefits of ExPress® technology to more feed producers and integrated operations,” said Jonathan Kingsbury, President & CEO at Insta-Pro International. “Insta-Pro has performed over 200 university studies proving advantages like a 4.4% improvement in digestibility in poultry as just one example. We are excited to combine our nutritional expertise with Desmet’s global reach and engineering excellence.”

In addition to its global engineering capabilities, Desmet brings to the partnership the **best-in-class mechanical pressing solutions from its RoseDowns brand**. RoseDowns, a proud member of the Desmet organization, has a legacy of innovation dating back to **1777** and is recognized as a global leader in pressing technology for high oil-bearing seeds such as soybeans, sunflower, rapeseed and others.

“Through our commercial network, our collaboration with Insta-Pro helps bring industry-leading process expertise and equipment solutions from the RoseDowns brand to the

ExPress® system,” said Olivier Hanne, President at Desmet. “We are proud that the Desmet Rosedowns’ Sterling press has been certified by Insta-Pro for use in ExPress® systems, ensuring optimal performance and reliability for our clients.”

The partnership has already achieved a significant milestone with the **first joint project secured in Ukraine**. The customer, a leading regional agribusiness with integrated operations in oilseed processing and animal feed production, will implement the ExPress® system to enhance feed quality and operational efficiency. This project marks a strong start to the collaboration’s global rollout and highlights the growing demand for solvent-free, high-performance feed processing technologies.

Together, Insta-Pro and Desmet are setting a new standard for feed processing technology, combining innovation, heritage, and global execution to deliver measurable value from farm to feed mill.

### **About Insta-Pro International**

Based in Grimes, Iowa, Insta-Pro International manufactures high-shear dry extrusion processing equipment for producing livestock and poultry ingredients, vegetable oils and soy food products. With research dating back to 1969, Insta-Pro has conducted 3<sup>rd</sup> party feeding trials to ensure their equipment provide optimum nutritional value for improved animal performance and are committed to leading the industry around the world in continuously improving quality, output and efficiency.
